

The future of crypto may not be for a lone coin but a family

March 7, 2018

The family is the basic unit of society. From the cave man to the present time, it has not deterred nor flinched to become the great civilization. Humanity survives because of family.

This could also be true for the future of cryptocurrency. We may not need an individual coin or token, perhaps what would satisfy our need and address the issue of uncertainty and its role to society is to have a group of coins/tokens that are intertwined and are working together as one single unit for the benefit of its stability and its value, thus a family of highly coupled coins/tokens is what we may need to push cryptocurrency to the future.

1. Safety in numbers

Nature has shown us that birds, fishes, and prey of the earth master this congregational masses. It has a natural tendency to avoid to be a victim of an attack other a mishap. In coins or tokens, if applied, this would be also true. Coins/Tokens under 'RAR Tokens theory of stability for cryptocurrency' are mathematically intertwined to support each other to preserve its stability in term of its value and its worth.

2. It's a family thing

Family corrects its member and the same way on 'RAR Tokens theory of stability for cryptocurrency' where a coin or token can be described its current price level as an anomaly and does not conform to its value ratio. This scenario would create imbalance and would produce an environment to pressure the coin/token to correct its price value to conform to the correct value ratio.

3. Individualism in unity

Individualism in 'RAR Tokens theory of stability for cryptocurrency' is also recognized due to the fact to their unique value ratio that defines their standing in the family which emanates its own characteristic and role. This would also facilitate the capability of coin/token being autonomous in determining its ideal price providing the reference from the other coins/tokens.
